Manipulating the data

After selecting the data, use the icons in the tool bar above the Results Panel to display data in the following formats: Trend, Map, Pie Chart, Rank.

TIP: The Results Panel tool bar includes a Show/Hide Data feature that allows you to choose which data values to display.

Use the Calculator button to create formulas and define new columns.

Exporting data

Export data via multiple options, including Excel, text, SAS, XML, and Shapefile. Export citations to reference management software. Statistical abstracts with visualizations can be exported in PDF and PPT formats.

Data Planet provides immediate access to standardized and structured datasets from public and private sources on topics covering multiple subject domains. Create charts, maps, graphs, and tables, with descriptive summaries and citations.

Accessing the data

Enter via your library’s website. The Data Planet interface is divided into three panels: Select data of interest from the Indicator Panel. Select variables of interest in the Criteria Panel. View results in the Results Panel, customizing the display using the black tool bar.

Finding datasets

Browse the Subject and Source folders on the right-hand side of the screen, or search using the search box in the top bar.

Selecting data

Click on the indicator of interest to select it.

TIP: To select multiple indicators and/or criteria, hold down the Control (Ctrl) key when clicking additional items on the indicator tree.

For datasets with long lists in the Criteria Panel, click the small magnifying glass in the grey bar above the list to search.

Statistical abstracts

Descriptive information about the statistical indicator(s) selected and the datasets from which they are drawn appear below the visualization:

Digital Object Identifiers (DOI) appear in two places in the statistical abstract. DOIs provide a persistent link to an exact replica of the statistical abstract, including the data visualization, at the time the DOI was created.
